KODI for computer (WINDOWS)

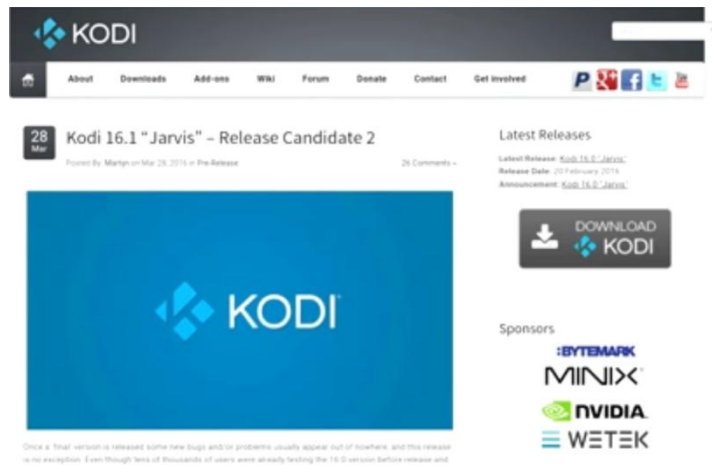

Don't forget to direct Kodi to your movies & photo on your computer

- 1) Go to the internet (internet explorer - Google - etc.)
- 2) Type in

<http://kodi.tv>

screen shot below

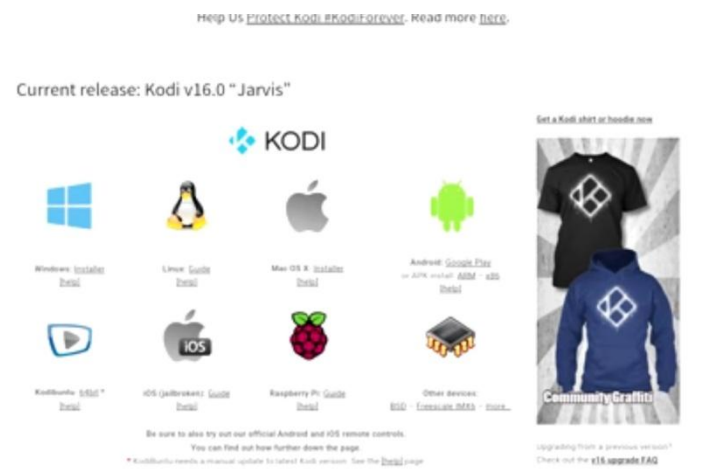

look on the right (Download Kodi)

The screen will change

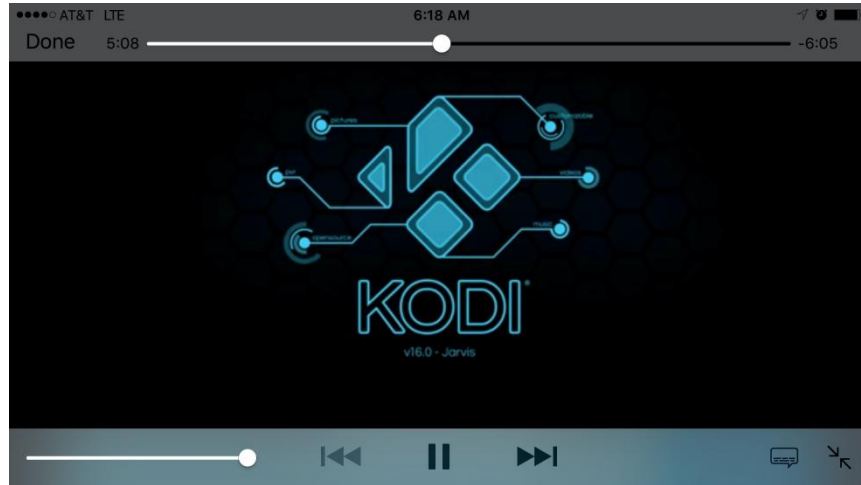

For the computer you would want to click on Windows

Screen shot below.

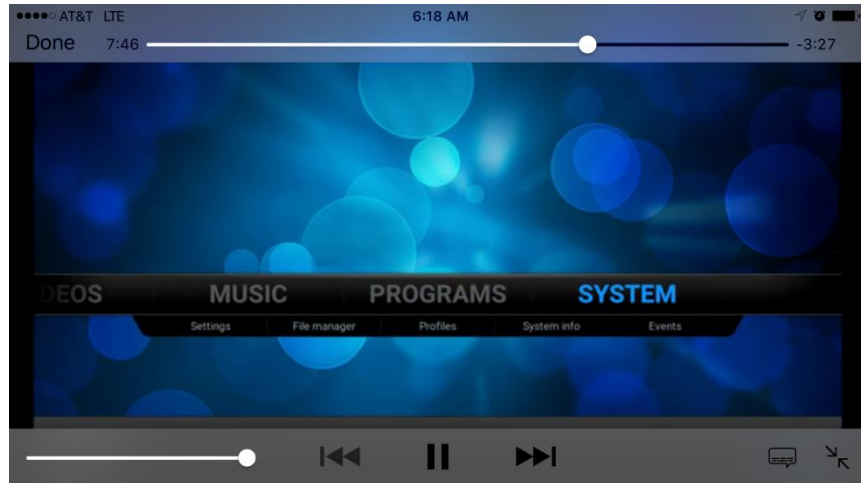

Install and start

Screen shot KODI

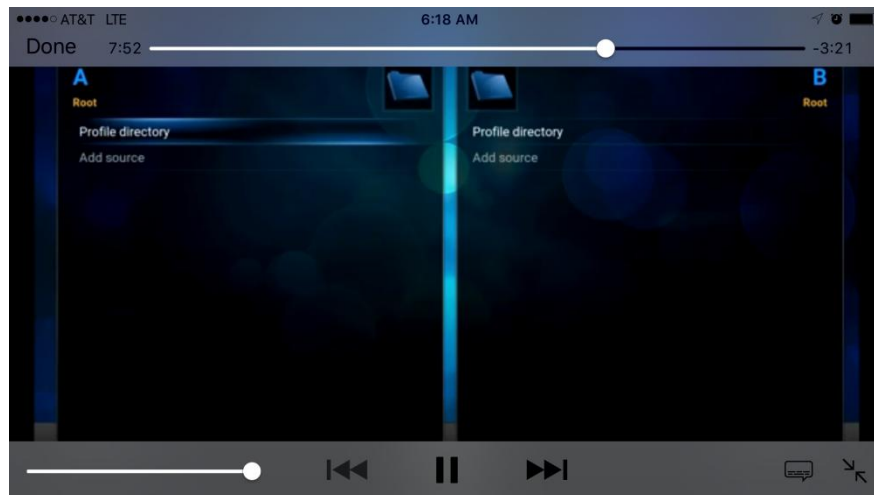

The screen will change

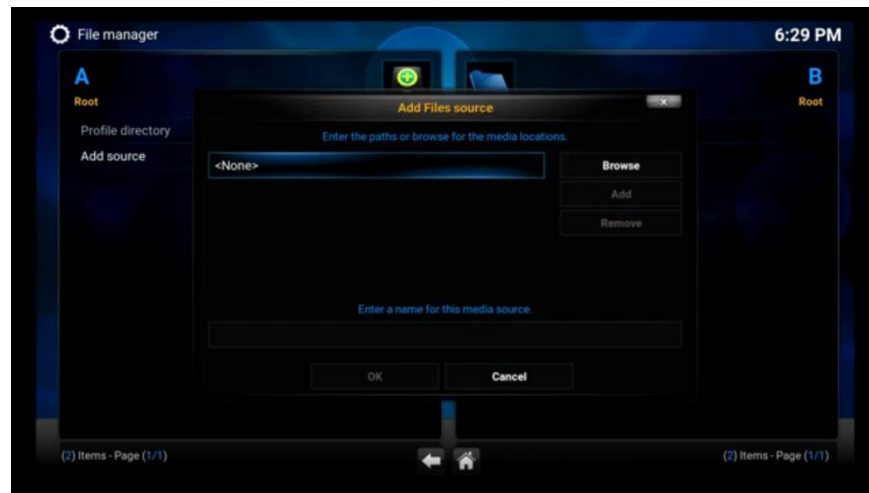

Select: SYSTEM then FILE MANAGER

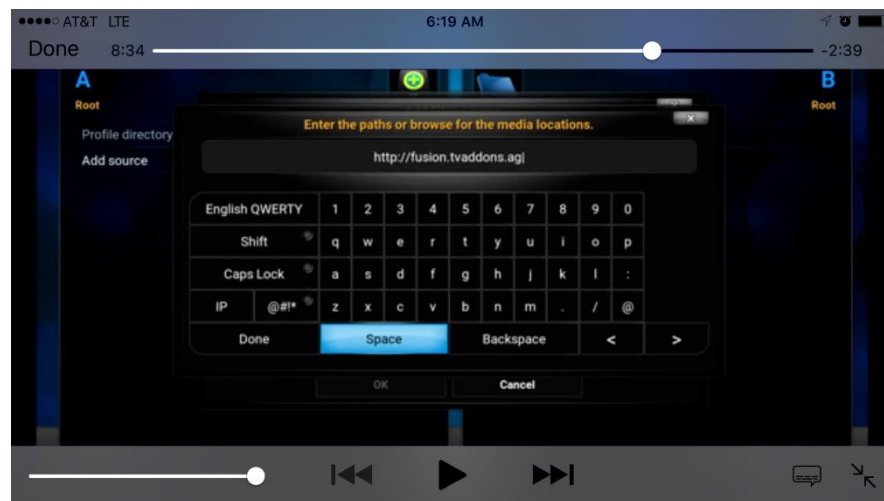

Add source

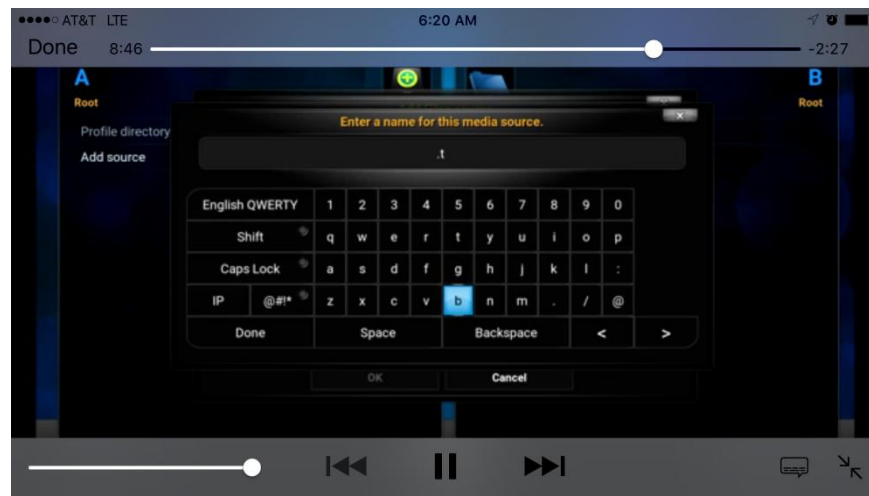

Type <http://fusion.tvaddons.ag>

Click done (Screen shot below)

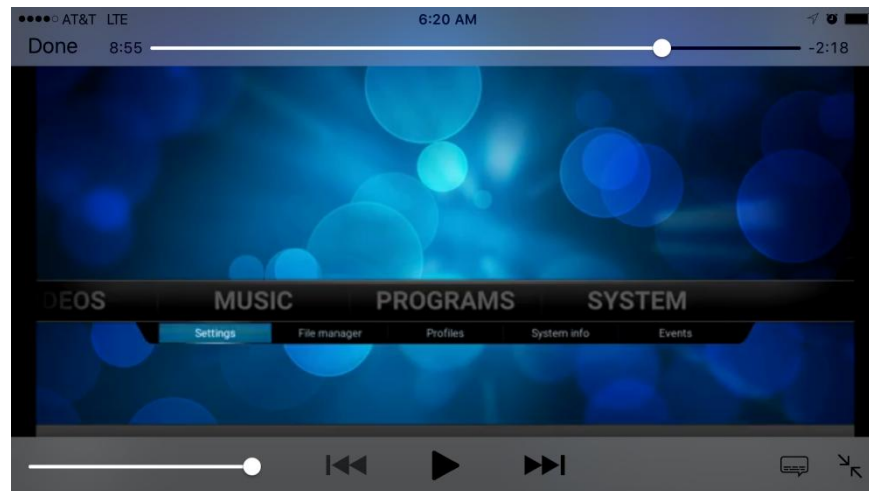

Now you need to name it. Some name it TV - I named it fusion

Click done.

Now go to SYSTEM then SETTING

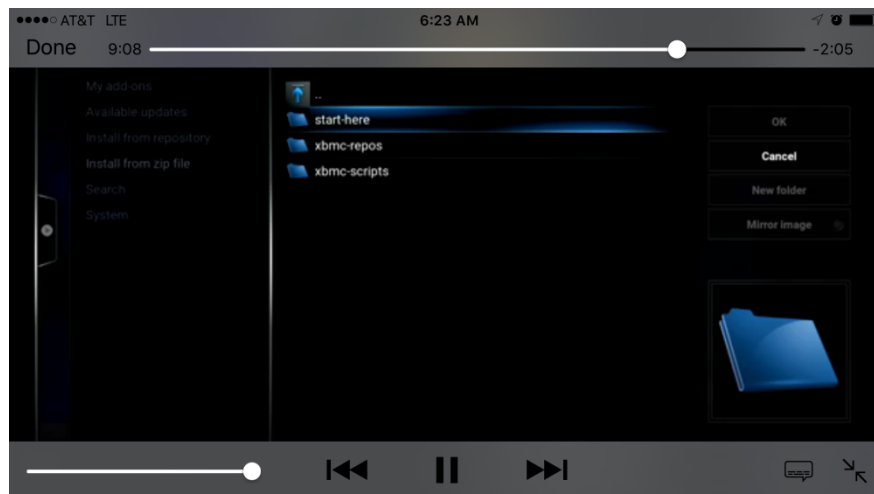

Install from zip file

On the left side: click on whatever you named it

For me it was fusion

click on START HERE

Click on

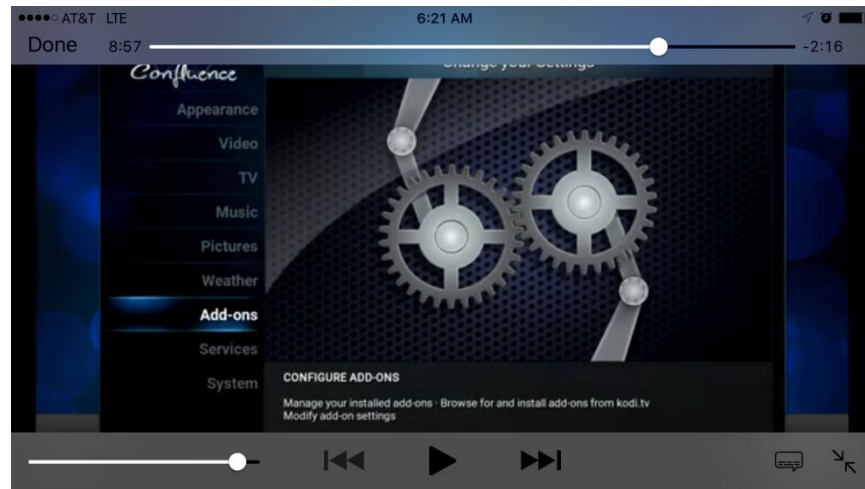

Plugin video hubwizard

WATCH: the hard drive photo on the right – below a pop up will show you when it's done. Screen shot below

Go to PROGRAMS then PROGRAMS ADD-ONS

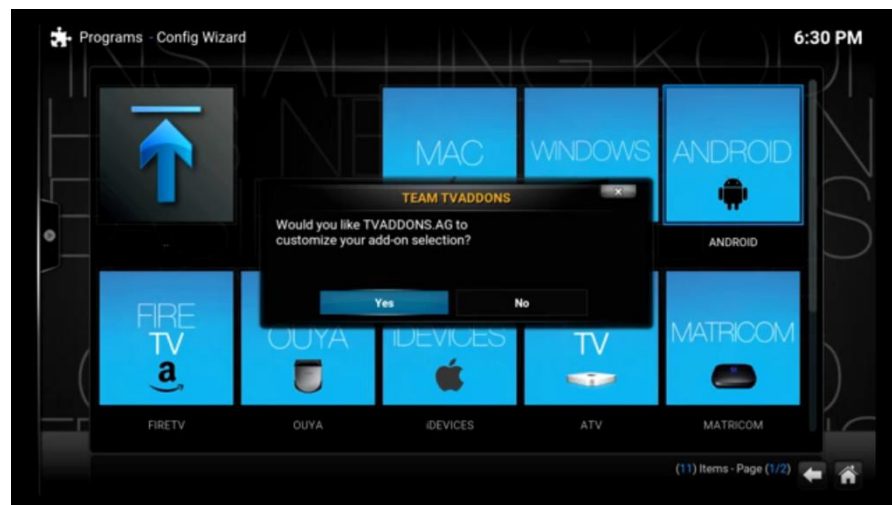

Click on CONFIG WIZARD

Screen will change

Click on WINDOWS then YES

When wizard is done.

Go to VIDEOS then ADD-ONS

This will show you channels

I find EXODUS very good

If you click on Exodus, the next page will be what you want Movies - TV etc.

I select: Movies - then in theaters

Find a movie and click on it

The screen will change - you select where you want to stream it from.
Sit back and enjoy the show.
